DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 11 is rejected under 35 U.S.C. 102(b) as being anticipated by Azuma (5,161,880).

3. Azuma teaches a light reflector in the form of a tube (24), a light diffuser 27, the tube enclosing one light source emitting light through an elongated lens (28) within the tube including means for biasing the light in at least one selected radial direction in a plane transverse to the tube (lens 28, has prismatic portions 28a which satisfy this function).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Azuma. Azuma discloses the claimed invention except for the recitation of the lens and diffuser being integral. It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the diffuser and lens of Azuma integral, since it has been held that forming in one piece a structure, which has formerly been formed in two, or more pieces, involves only routine skill in the art. *In re Larson*, 144 USPQ 347, 349 (CCPA 1965). One would have been motivated to make the diffuser and lens integral for the purpose of producing a streamline optical plate that reduces bulk.

Allowable Subject Matter

1. Claims 1-10 are allowed.
2. Claims 13,14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art cited does not teach the limitations of claim 1, in particular the combination of a reflector extending along the length of said tube and having angularly disposed portions proximally joined at an apex on an optical axis of symmetry, said angularly disposed portions having distal edges; a diffuser extending for the length of said tube and having angularly disposed proximal portions terminating in distal edges engaged with the reflector; a lens extending between the distal edges of the diffuser, and

separating the reflector from the diffuser and the lens being reversible or the light source being longitudinally movable.
